Campaign attribution by effective date: diagnostic report

POC feedback item 2: "Ryan to separate performance by campaign and effective date. If an agent worked Download/Upsell for part of the month and another campaign thereafter, AgentOS must not blend those results together without clearly showing the campaign split. We should still have an overall view, but campaign-level performance must be available."

29 / 29	7 / 7	47 / 91	0
campaign-split checks (engine, digest, pages)	campaign-manager checks for the split (of 76/76)	suites passed in the full run	failures caused by this change

Summary

- **The cause:** the Agent List decides an agent's campaign for the whole month, because a list is a snapshot and cannot say *when* someone moved. An agent on Download & Test for 1–7 September and Courtesy from the 8th was counted as Courtesy for the whole month, and their card showed one combined figure.
- **The fix:** effective-dated campaign assignments (CB, Campaign, Effective From, optional Effective To), added on PULSE's Settings page or uploaded as a sheet. On those dates the assignment decides the day's campaign. Every report then keeps each campaign's work separate and adds a whole-month total beside it.
- **What the agent sees:** figures, target and commission for the campaign they are on now; a "Your month by campaign" card with each campaign's dates and results plus an "All campaigns" row; a header that names both campaigns.
- **What managers see:** PULSE's month-to-date tables per campaign; the team leader's table flags movers; the campaign-manager overview counts a mover's earlier week in that campaign's totals, not the new one.
- **Tested:** 29 of 29 campaign-split checks and 76 of 76 campaign-manager checks pass. In the full run of 91 suites, 47 pass and none fails because of this change. The rest need credentials, files or network this environment lacks, apart from one failure that was already there before today.
- **Not deployed:** the site and, for this change, the Worker both need deploying. This environment has no Cloudflare access.

How a day's campaign is decided now

Order	Source	When it applies
1	The day's tracker row	A hand-built tracker sheet for that day names the campaign (unchanged, first as before).
2	**A campaign assignment (new)**	The day falls between its Effective From and Effective To (or has no end). The latest start date wins; a correction with the same start date replaces the earlier one.
3	The Agent List	Everything else: the list still decides its whole month, as before.
4	The live roster	Only for an agent with no history at all (unchanged).

Every campaign an assignment names becomes a reported campaign, so a Download & Test week is kept and shown, not dropped. The agent's **current campaign** is the one on their latest worked day. Their card, commission, peer group and rating window follow it, and every other campaign they worked travels beside it, never added in.

Illustrative test cases

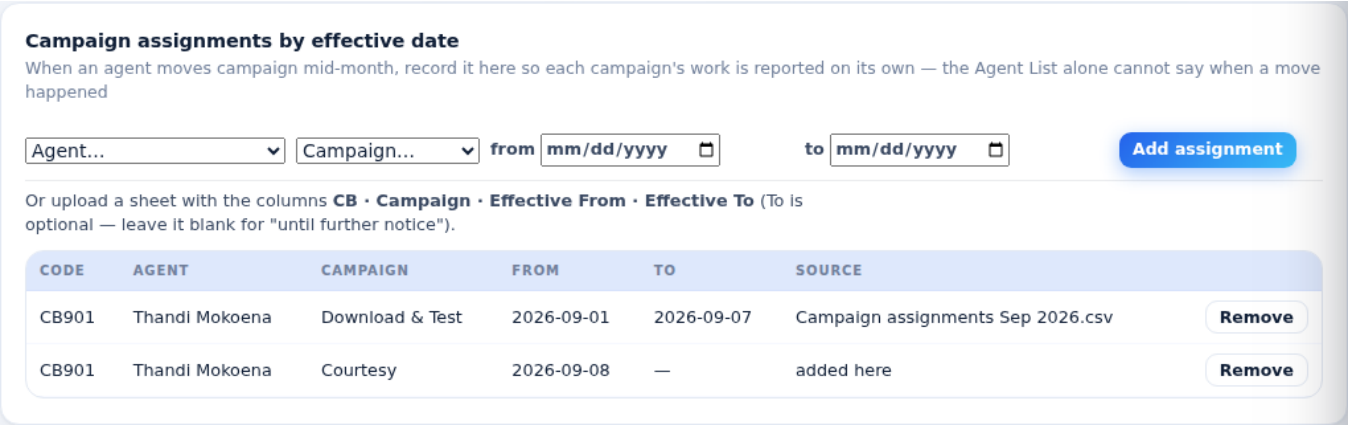

Each case is a real check in `verify-campaign-split.mjs` or `verify-campaign-manager.mjs`. It runs the actual PULSE engine, the Agent Analytics page and the Worker code on fictional data, and the result column is that check's outcome from the run behind this report. **The scenario:** September 2026, weekdays 1–18 Sep. The Agent List says CB901 is on Courtesy all month. CB901 really worked Download & Test for 1–7 Sep (2 sales a day at R40) and Courtesy from 8 Sep (3 sales a day at R89). CB902 was on Courtesy all month, as a control.

#	Case	Input	Expected (and observed)	Result
TC1	**The blend (before)**	No assignment recorded.	Agent List claims the whole month: one Courtesy row, 14 shifts, 37 sales mixed together.	**PASS**
TC2	**Upload an assignment sheet**	CSV: CB901 · Download & Test · 2026-09-01 · 2026-09-07 and CB901 · Courtesy · 2026-09-08 · (blank); one row with no campaign.	Detected through the normal upload path; both rows stored with their dates; the bad row is named ("row 4 (no campaign)"), never guessed.	**PASS**
TC3	**Each day lands in its own campaign**	TC2 loaded.	1–7 Sep → Download & Test (5 working days); 8–18 Sep → Courtesy (9). Download & Test becomes a reported campaign with its own totals: 5 shifts, 10 sales.	**PASS**
TC4	**The agent's row is the current campaign only**	TC2 loaded.	Current campaign = Courtesy. Row: Courtesy, 9 shifts, 27 sales, Experienced–Courtesy commission plan. The Download & Test week is not in it.	**PASS**
TC5	**Campaign-level and overall views**	TC2 loaded.	byCampaign: Download & Test 1–7 Sep (10 sales, Download/Upsell plan) and Courtesy 8–18 Sep (27 sales, marked "now"). Overall: 14 shifts, 37 sales. Overall % of target withheld because Download & Test has no target.	**PASS**
TC6	**Rating window stays in one campaign**	TC2 loaded.	The 5-session rating uses Courtesy sessions only, so a R40 Download week is never judged against Courtesy's R99 floor.	**PASS**
TC7	**Day rows name their campaign**	TC2 loaded.	CB901's 14 day rows carry their campaign (5 Download & Test). CB902, on one campaign, carries no split and no per-day campaign.	**PASS**
TC8	**Corrections and wording**	Add "Upsell" for CB901 from 2026-09-01 again.	"Upsell" maps to the floor's Download & Test; the new entry replaces the old one with the same start date (one active, not two).	**PASS**
TC9	**Removal is safe and reversible**	Remove the assignments; merge with an older copy of the state.	The removal survives a merge either way (another open tab cannot bring it back); with none left, CB901 returns to one Courtesy row, 14 shifts, 37 sales.	**PASS**
TC10	**Agent page shows the split**	Agent Analytics rendered from the digest the engine produced.	Header "Courtesy since 8 Sep · also Download & Test 1 Sep – 7 Sep … worked on Courtesy"; "Your month by campaign" with both campaigns and All campaigns; "To reach your Courtesy target for September"; the commission page projects Courtesy only, on its own plan.	**PASS**
TC11	**No change for single-campaign agents**	CB902 rendered.	No split card, no "since" wording — the page is exactly as before.	**PASS**
TC12	**Team leader's Month to Date**	Team view rendered from the same digest.	The mover is marked under their name; a note says 1 agent worked more than one campaign and their row is the campaign they are on now.	**PASS**
TC13	**Campaign-manager totals**	Worker overview: CB4 on Courtesy now, with a Cuddle week (20 sales) earlier.	Cuddle 330 → 350 (the week counts in Cuddle, and in the team the mover sat in: 150 → 170); Courtesy stays 60; Cuddle QA is unchanged (the part carries no QA); a Cuddle-only manager sees 350; with no split, Cuddle is 330 as before.	**PASS**

What it looks like

Screenshots from the real pages running the TC2 scenario, with figures to 25 Sep (fictional agent "Thandi Mokoena", CB901).

Recording a move: PULSE → Settings → "Campaign assignments by effective date"

The agent's header: before (the list decides the month) and after (the split is named)

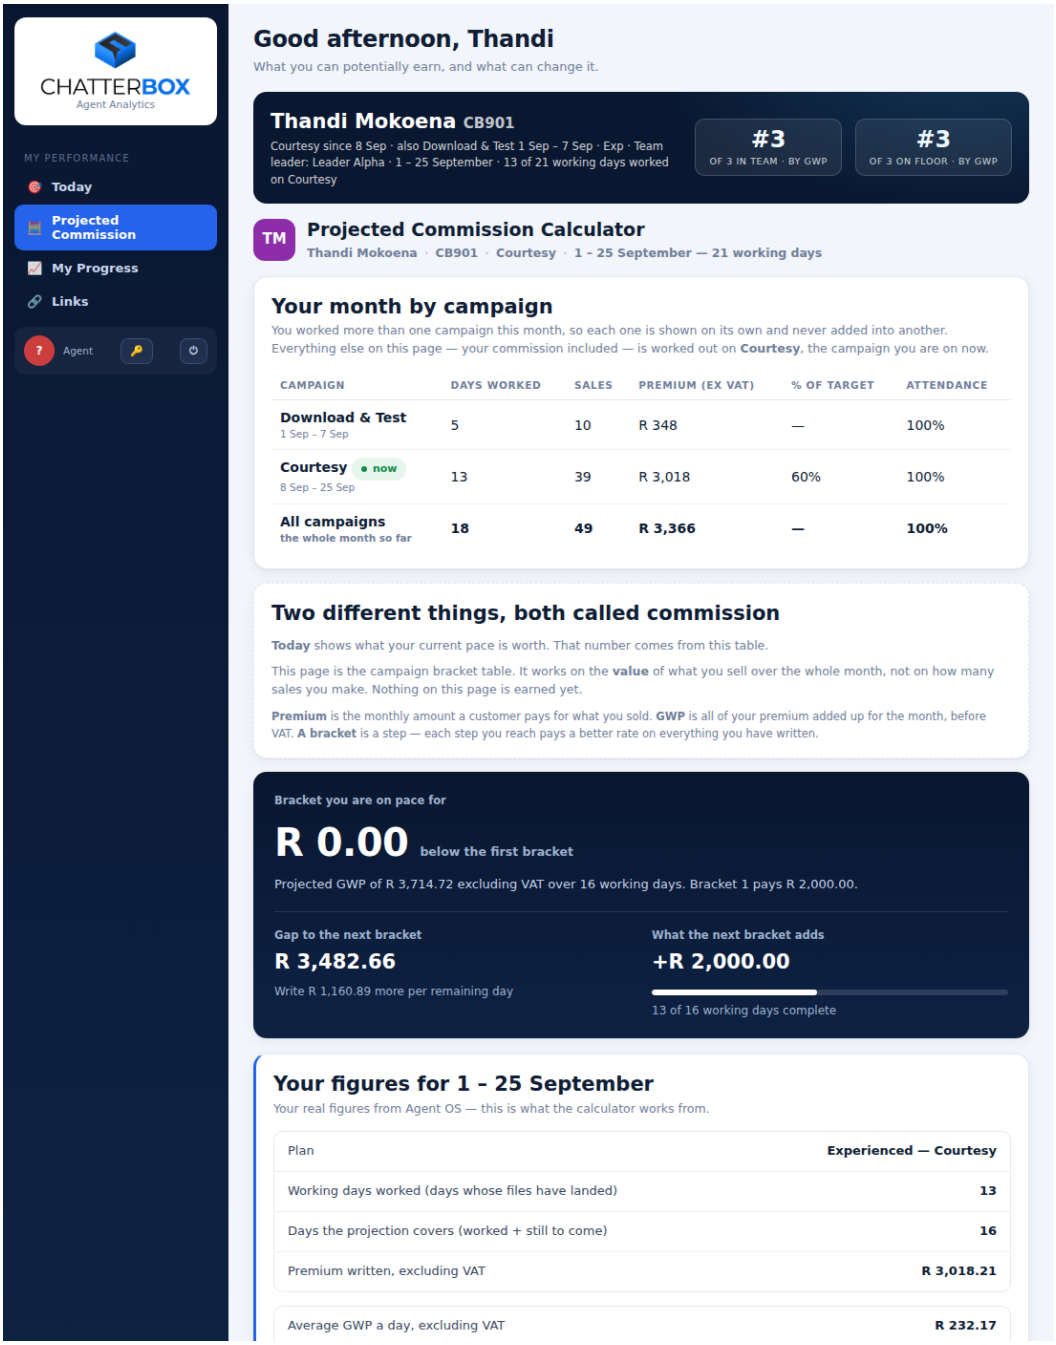

Before: 18 working days all counted as Courtesy. After: 13 days on Courtesy, with the Download & Test week named.

The campaign split card (Today, the team leader's drill-down and Projected Commission)

Each campaign on its own line, the current one marked. The "All campaigns" row adds days, sales and premium but shows no % of target, because Download & Test has no daily target in the rule book yet.

Projected Commission for the mover

The projection runs on Courtesy only: 13 Courtesy days worked plus 3 still to come = 16 days, on the Experienced–Courtesy plan with Courtesy premium (R3,018). The Download & Test week sits in the split card above it and is not added in.

Every check behind the test cases

verify-campaign-split.mjs (29/29)

✓ an assignment sheet is detected and registered through the real upload path
✓ both CB901 assignments are stored with their dates
✓ a row it cannot read is named with the reason, never guessed
✓ "Upsell" folds to the campaign the floor already calls Download & Test
✓ a correction with the same agent and start date replaces the first (one active, not two)
✓ a removal survives a merge with an older copy, in either direction
✓ Download & Test becomes a reported campaign because an assignment names it
✓ 1–7 Sep land in Download & Test (5 working days), 8–18 Sep in Courtesy (9)
✓ the Download & Test week is its own aggregate: 5 shifts, 10 sales
✓ the current campaign is the latest one worked (Courtesy)
✓ the rating window stays inside the current campaign
✓ the top-level row is the CURRENT campaign only: Courtesy, 9 shifts, 27 sales, the Courtesy plan
✓ byCampaign carries both campaigns in date order, each with its dates
✓ …each with its own figures and commission plan (Download & Test on EXP_DOWNUP), the current one marked
✓ overall is the whole period across both: 14 shifts, 37 sales
✓ overall "% of target" is withheld while a campaign has no target (never a blended 37 ÷ Courtesy's target)
✓ the day rows name their campaign for a split agent
✓ an agent on one campaign carries no split and no per-day campaign
✓ without an assignment the list claims the whole month: one Courtesy row, 14 shifts, 37 sales blended
✓ removing the assignments restores exactly that
✓ no page errors
✓ the header names the current campaign and the other one with its dates
✓ …and counts only the current campaign's days ("… working days worked on Courtesy")
✓ "Your month by campaign" lists both campaigns, the current one marked, and the whole month
✓ the target sentence is the Courtesy target, not a blended month
✓ no placeholder leaked
✓ Projected Commission carries the split card and projects Courtesy only (its own GWP, its own plan)
✓ an agent who worked one campaign sees no split card
✓ the team leader's Month to Date marks the mover under their name and says their row is one campaign

verify-campaign-manager.mjs — the split section (7/7; the whole suite 76/76)

✓ Cuddle counts the mover's Cuddle week: 330 + 20 = 350 (got 350)
✓ …and still reconciles with its teams
✓ Courtesy is exactly as before (60) — the Cuddle week is never added into it (got 60)
✓ the week lands in the team the mover sat in (150 + 20 = 170)
✓ the part-row carries no QA of its own — Cuddle QA is still the mean of its three agents
✓ a Cuddle-only manager sees the Cuddle week (350)
✓ without a split the Cuddle total is unchanged (330)

The full test run (91 suites)

Run one after another on the committed code with a 300-second limit. The CDN libraries are served from identical local copies because cdnjs is unreachable here. BLOCKED means the suite needs something this environment does not have.

Limits and open items

- **Assignments have to be recorded.** The system cannot know about a move nobody records. Without one, the Agent List still decides the whole month, exactly as before (TC1).
- **Download & Test has no daily sales target in the rule book**, so its "% of target" reads "—" and the "All campaigns" percentage is withheld. Give the target per day and both will show.
- **Commission for the part-month on the old campaign** is shown on its own line, but how payroll pays it is a business decision, not a system one.
- **The Ops dashboard** keeps its own campaign model (by design) and is not changed by this.
- **A tracker row still comes first** for its day, as before; an assignment that contradicts a tracker row loses on that day.
- **Deploy:** the site and the Worker (worker/src/campaign.mjs) both need deploying. This environment has no Cloudflare token and its network blocks Cloudflare. After deploying, Ryan records or uploads September's moves in PULSE.
