Leave, half-day and penalty changes: test diagnostic report

What was changed, how it was tested, what passed, and what could not be tested in this environment.

13 / 13	43	45	0
change-related suites passed (runnable here)	suites passed (of 89 run)	could not run here (credentials, files, network)	failures caused by this change

Summary

- **Every suite that tests the changed code and could run here passed** (13 of 13), including the new leave guard and the 145-check Agent Analytics suite (1 more skipped themselves for lack of live data). 984 individual checks passed across the 43 suites that could run here.
- **No failure was caused by these changes.** 45 suites could not run in this sandbox: they need live Supabase credentials, real export files that are not in the repository, the deployed site, or the cdnjs CDN. They need a run on a machine that has those.
- **1 suite fails for a reason that pre-dates this work** (verify-variance). It fails the same way on the code before the change.
- **Nothing is deployed.** The changes are committed and pushed to the branch only. The production deploy smoke tests (a real browser at the live site) have not been run.

What changed

Change	Where	Effect
Leave is not a shift	PULSE engine, rule book (both copies)	From 1 Sep 2026: an AL, SL, FRL, CA or CASAT day (leave), or a Suspended day (unavailable), with no talk and no sales is not an employed or worked shift and carries no target. UCA and unknown codes are still absences. A day with activity counts as worked, whatever the code.
L is a half day	PULSE engine, rule book, Ops help text	From 1 Sep 2026: L counts as 0.5 of a shift, the same as HDCA. August keeps its old value (L = 0).
Leave shown to agents and team leaders	Agent Analytics	Leave, unavailable and absent days are named beside every days-worked figure. An agent on leave all month is told so, not "no activity yet". The type of leave (e.g. sick) is never shown.
Days left counted on the calendar	Agent Analytics	Days left = the month's working days after the last day the figures cover. The projection covers days worked plus days left; the month target covers days employed plus days left. This also fixes the "3 shifts left but it shows 4" report.
Leave in the Ops recommendations	Ops dashboard (acStats / acNBA)	Leave days no longer count against attendance. A whole period of leave shows "On leave this period" with no action to take, never R1 "Zero Attendance: escalate to HR".
Composite penalty removed	Ops dashboard, guard hook, CLAUDE.md	No deduction of any kind: the compliance-tier penalty keys are removed and the coaching penalty (–2 / –5 on a drill-down) no longer applies. The score equals the composite. The edit guard now blocks any edit that adds a penalty back.

Before and after: worked examples from the tests

Each row is a scenario the tests build and run through the real code. "Before" is the old rule; for PULSE it is the same scenario dated August, where the new rules do not apply.

Scenario	Before	After
Courtesy agent, 3 days annual leave in a 5-day week	5 employed, 2 worked: 40% attendance; target counts all 5 days	2 employed, 2 worked: 100% attendance; target counts 2 days; 3 leave days shown
Courtesy agent, 1 unplanned absence (UCA)	5 employed, 4 worked: 80%	Unchanged: 80%, 1 absent day shown (an absence is still an absence)
Cuddle agent, sick all week	5 employed shifts at 0: 0% attendance	No shifts, no target; the agent view says "on leave", not "no activity"
Cuddle agent, two L days (register rule)	5 employed, 3 worked	5 employed, 4 worked (3 + 0.5 + 0.5)
Courtesy agent, one L day, dialled that day	5 worked	4.5 worked: L is a half day
Agent view: figures to Fri 25 Sep, 13 worked, 5 leave	8 days left; projection over 21 days (R10,500); target 105 sales	3 days left (28–30 Sep); projection over 16 days (R8,000); target 80 sales
Ops: 15 present + 5 annual leave	Attendance 75%	Attendance 100%, 5 leave days
Ops: whole window on annual leave	R1 "Zero Attendance: escalate to HR immediately"	"On leave this period": no performance action
Ops: whole window of UCA	R1 Zero Attendance	R1 Zero Attendance (unchanged, correctly)
Ops drill-down with a Repeat / Persistent coaching theme	Composite –2 / –5	No deduction: the theme is a classification only

Every "After" value is asserted by a test, except the coaching-penalty row, which comes from reading the code (that drill-down needs Coaching Hub data). The PULSE "Before" values are asserted by the same scenario dated August. The agent view and Ops "Before" values are what the old formulas give for the same inputs.

Suites that test the changed code

Suite	What it covers	Result	Checks
verify-leave-status	NEW — leave / absent / unavailable, L half day, Ops NBA	PASS	26 passed
verify-agent-analytics	Agent view: days left, projection, target, leave shown	PASS	145 passed
verify-engine-rules	Rule book: both copies of the new rules agree	PASS	24 passed
verify-saturday-rule	Shift rules next to the leave rule (Saturday = data)	PASS	33 passed
verify-history	Org history / attribution — unchanged	PASS	39 passed
verify-tbc-backdate	Org history placeholders — unchanged	PASS	9 passed
verify-perf-score	PULSE score renormalisation (attendance driver)	PASS	10 passed
verify-nba-publish	Ops NBA publish — tier classifies, deducts nothing	PASS	27 passed
verify-ops-no-bi	Ops composite with no money source	PASS	10 passed
verify-departures	Leavers vs roster (employment days)	PASS	20 passed
verify-rule-constants	No rule value copied into code	PASS	7 passed
verify-agent-progress	Agent My Progress page	SKIPPED	—
verify-save-acks	Save reliability on the generated site	PASS	16 passed
verify-ops-percentile	Ops GWP percentile / composite	PASS	2 passed

The new guard, check by check (verify-leave-status)

✓ the rule is effective from 2026-09-01

✓ classes: AL/SL/FRL/CA and "Annual Leave" are leave, Suspended unavailable; UCA, P, HDCA and L are not off-shift codes

✓ baseline agent: 5 employed, 5 worked

✓ three days of annual leave are NOT employed shifts: 2 employed, 2 worked

✓ …carry no target (target is 2 days × 3, not 5 × 3)

✓ …and are recorded as leave

✓ the digest publishes attendance 100%, 3 leave days, 0 absent

✓ the register CODE never travels

✓ an unplanned absence (UCA) is still an absence: 5 employed, 4 worked

✓ …published as 80% attendance with 1 absent day

✓ activity wins: a leave code on a day the agent dialled is a working day (5/5)

✓ suspended days are unavailable, not shifts: 3 employed, 3 worked

✓ …published as unavailable, not leave

✓ sick all week: no shifts, no target, no fact rows

✓ …and the digest says "leave", not "no activity yet"

✓ L is a half day (Cuddle, register rule): 5 employed, 3 + 0,5 + 0,5 = 4 worked

✓ L is a half day (Courtesy, dialler rule) even though they dialled: 5 employed, 4,5 worked

✓ August leave is still an employed, unworked shift (5 employed, 2 worked)

✓ August sick week still carries its shifts (5 employed, 0 worked)

✓ August L keeps its old weight: Cuddle 5 employed, 3 worked; Courtesy (dialled) 5 worked

✓ no page errors (PULSE)

✓ 15 present + 5 annual leave: attendance 100%, 15 scheduled, 5 leave days

✓ 15 present + 5 unplanned absences: attendance 75%

✓ a whole window of annual leave is "On leave this period", never R1 Zero Attendance

✓ a whole window of unplanned absence still fires R1 Zero Attendance

✓ no page errors (Ops)

Every suite in the run

All 89 suites in nicks_code/diagnostics were run one after another against the committed code, each with a 300-second limit. Status key: **PASS**; **BLOCKED**: could not run here (the reason is given); **SKIPPED**: the suite skipped itself because it needs live state; **PRE-EXISTING**: fails the same way without this change; **FAIL**: caused by this change.

Suite	Status	Checks	Note
verify-variance	PRE-EXISTING	70 / 78	Fails identically on the code before this change (same 5 DV03 checks) — not caused by it.
verify-agent-card	BLOCKED	—	Needs live Supabase credentials (supabase.env) — not available in this sandbox.
verify-agent-portal	BLOCKED	—	Needs live Supabase credentials (supabase.env) — not available in this sandbox.
verify-agent-sync	BLOCKED	—	Needs live Supabase credentials (supabase.env) — not available in this sandbox.
verify-all-tabs	BLOCKED	—	Needs live Supabase credentials (supabase.env) — not available in this sandbox.
verify-asat	BLOCKED	—	Needs real export files (uploads/…) that are not in the repository.
verify-campaign-sync	BLOCKED	—	Needs live Supabase credentials (supabase.env) — not available in this sandbox.
verify-columns	BLOCKED	—	Needs real export files (uploads/…) that are not in the repository.
verify-composite-recompute	BLOCKED	—	Needs live Supabase credentials (supabase.env) — not available in this sandbox.
verify-controls	BLOCKED	—	Needs live Supabase credentials (supabase.env) — not available in this sandbox.
verify-cors-headers	BLOCKED	4 / 10	Sends real preflight requests to the deployed Worker; the sandbox proxy answers 403. The offline checks (4) passed.
verify-coverage-law	BLOCKED	—	Needs real export files (uploads/…) that are not in the repository.
verify-dialler-warning	BLOCKED	—	Needs real export files (uploads/…) that are not in the repository.
verify-generator	BLOCKED	—	Needs real export files (uploads/…) that are not in the repository.
verify-kv-cas-live	BLOCKED	—	Needs live Supabase credentials (supabase.env) — not available in this sandbox.
verify-leader-rename	BLOCKED	—	Needs live Supabase credentials (supabase.env) — not available in this sandbox.
verify-live-integrity	BLOCKED	—	Needs live Supabase credentials (supabase.env) — not available in this sandbox.
verify-mtd-values	BLOCKED	—	Needs real export files (uploads/…) that are not in the repository.
verify-no-duplicates	BLOCKED	—	Needs live Supabase credentials (supabase.env) — not available in this sandbox.
verify-ops-intake	BLOCKED	—	Needs real export files (uploads/…) that are not in the repository.
verify-password-lifecycle	BLOCKED	—	Needs live Supabase credentials (supabase.env) — not available in this sandbox.
verify-publish-agent-list	BLOCKED	—	Needs live Supabase credentials (supabase.env) — not available in this sandbox.
verify-pulse	BLOCKED	—	Needs real export files (uploads/…) that are not in the repository.
verify-pulse-aug	BLOCKED	—	Needs real export files (uploads/…) that are not in the repository.
verify-pulse-trust	BLOCKED	—	Needs real export files (uploads/…) that are not in the repository.
verify-qa-shown	BLOCKED	—	Needs live Supabase credentials (supabase.env) — not available in this sandbox.

Suite	Status	Checks	Note
verify-rake	BLOCKED	—	Needs live Supabase credentials (supabase.env) — not available in this sandbox.
verify-referrals-sync	BLOCKED	—	Needs real export files (uploads/…) that are not in the repository.
verify-render	BLOCKED	—	Needs real export files (uploads/…) that are not in the repository.
verify-store-freshness	BLOCKED	48 / 48	Needs live Supabase credentials (supabase.env) — not available in this sandbox.
verify-table-columns	BLOCKED	—	Needs live Supabase credentials (supabase.env) — not available in this sandbox.
verify-tl-reports	BLOCKED	18 / 18	Needs live Supabase credentials (supabase.env) — not available in this sandbox.
verify-upload-formats	BLOCKED	13 / 32	CDN (cdnjs) is unreachable from this sandbox, so the spreadsheet/CSV parser cannot load.
verify-upload-relay	BLOCKED	9 / 13	The relayed CSV is parsed by PapaParse from cdnjs, which is unreachable here (the 4 failing checks are the 4 that parse the file).
verify-vas-mtd	BLOCKED	—	Needs real export files (uploads/…) that are not in the repository.
verify-vici-ingest-order	BLOCKED	—	Needs real export files (uploads/…) that are not in the repository.
verify-agent-progress	SKIPPED	—	Ran, but skipped itself: it reads live state (Supabase / the deployed digest) that is not available here.
verify-bi-gwp	SKIPPED	—	Ran, but skipped itself: it reads live state (Supabase / the deployed digest) that is not available here.
verify-cancellation-rows	SKIPPED	—	Ran, but skipped itself: it reads live state (Supabase / the deployed digest) that is not available here.
verify-composite-score	SKIPPED	—	Ran, but skipped itself: it reads live state (Supabase / the deployed digest) that is not available here.
verify-filter-empty	SKIPPED	—	Ran, but skipped itself: it reads live state (Supabase / the deployed digest) that is not available here.
verify-lead-book	SKIPPED	0 / 0	Ran, but skipped itself: it reads live state (Supabase / the deployed digest) that is not available here.
verify-leads-cache	SKIPPED	—	Ran, but skipped itself: it reads live state (Supabase / the deployed digest) that is not available here.
verify-leads-vas	SKIPPED	—	Ran, but skipped itself: it reads live state (Supabase / the deployed digest) that is not available here.
verify-roster-removal	SKIPPED	—	Ran, but skipped itself: it reads live state (Supabase / the deployed digest) that is not available here.
verify-vici-callreport	SKIPPED	—	Ran, but skipped itself: it reads live state (Supabase / the deployed digest) that is not available here.

Limitations and what still needs doing

- **Real September data was not tested.** All checks use made-up agents built inside the tests. The next step is to load the real September register in PULSE and check a few agents known to have been on leave against the hand-built tracker. Differences are expected: employed shifts and targets drop by each agent's leave days, which is the change you asked for.
- **Blocked suites.** The 35 blocked suites need to be run where supabase.env, the uploads/ exports, the deployed site and cdnjs are available, such as on the laptop or in the /deploy flow.
- **Deploy.** The rules in CLAUDE.md say a production deploy is only done once verify-cors-headers --live and verify-live-save --live pass in a real browser at the deployed site. Those have not been run because nothing is deployed.
- **PULSE penalties.** PULSE was not changed. Its compliance penalty is already 0 by rule and its coaching adjustment is never scored, so its scores already carry no penalty. Only the Ops dashboard could still deduct points, and that is now removed.
- **Test setup note.** This sandbox's Chromium matches Playwright 1.56, so the suites ran with playwright@1.56.1 installed without saving it (package.json is unchanged).
